ADARSHA ARYAL

Data Analyst

Melbourne, Australia | +61 449 020 354 | adarsha.aryal653@gmail.com | LinkedIn | GitHub | Website

SUMMARY

Data and analytics professional with a strong foundation in analysing operational, project, and commercial data to support business decision-making. Skilled in SQL, Python, Excel, and Power BI/Tableau, with expertise in data analysis, dashboard development, performance reporting, and process optimisation. Proven ability to transform complex data into actionable insights that improve business outcomes.

EXPERIENCE

Data Analyst — Hubsteer Pty Ltd (Full Time) June 2026 – Present

Melbourne, Australia

- Engineered structured ETL data pipelines from unstructured MongoDB collections using Python, reducing data processing time by 67% and enabling seamless predictive modelling for downstream analytics.
- Identified key growth opportunities across 5+ travel client datasets by executing EDA and statistical analysis in Python and R, uncovering $250K in potential revenue streams for executive decision-makers.
- Optimised client revenue strategies by constructing Python-based predictive models for dynamic pricing and order forecasting, improving pricing accuracy by 85% and increasing average order value by 45%.
- Designed 5+ interactive Power BI and Python dashboards to translate complex travel datasets, reducing executive decision-making time by 65% across 3 key business units.
- Built a FastAPI/Python recommendation engine using MongoDB, pandas, Google Analytics and paid-media APIs to analyse 100,000+ tour-booking and marketing records, producing 100+ product-level sales, pricing, marketing, distribution and customer-experience recommendations with explainable JSON evidence and estimated financial impact.

Agentic Specialist — Enspyr Pty Ltd (Part Time) March 2026 – Present

Melbourne, Australia

- Built an automated LLM evaluation harness in Python to compare model quality, consistency, token efficiency, and response latency across 100+ benchmark prompts, accelerating model selection while improving evaluation reliability.
- Optimised LLM inference routing by benchmarking domain-specific models and implementing cost-aware model selection logic, reducing inference costs by 35% while maintaining response quality above 95% on internal evaluation benchmarks.
- Investigated similarity-based retrieval and memory architectures to reuse historical experiment outcomes, laying the foundation for adaptive LLM routing capable of continuously improving model selection accuracy over time.

Project Analyst — China Communication Services (Full Time) Oct 2019 – Dec 2023

Beijing, China

- Reduced design errors by 25% across 100+ 4G deployment projects by automating technical survey data validation routines in Excel, ensuring seamless installation planning and high dataset integrity.
- Accelerated regional 4G rollout timelines by conducting exploratory analysis on tower site metrics and delivering data-driven equipment optimisation reports to senior engineering leads.
- Boosted project reporting accuracy to 99% by establishing cross-functional data-clearing workflows with field survey teams, maintaining strict adherence to client compliance standards.

Project Analyst — Air Flow Industries Pvt Ltd (Full Time) Sep 2017 – Oct 2019

Kathmandu, Nepal

- Reduced technical planning errors by 20% by building structured data validation routines in Excel for 50+ pharmaceutical HVAC installation datasets, ensuring high dataset integrity prior to site execution.
- Uncovered 12% in cost optimisation opportunities across major facility installations by engineering financial variance models to analyse resource allocation, material costs, and expenditure trends.
- Accelerated stakeholder reporting timelines by designing automated progress-tracking dashboards and synthesising complex engineering datasets into actionable insights for cross-functional leads.

TECHNICAL SKILLS

Data & Analytics: SQL (Joins, CTEs, Window Functions), Python (Pandas, NumPy, Matplotlib), R, Power BI (DAX, Power Query), Tableau, Excel (Pivot Tables, XLOOKUP), Data Wrangling / Analysis / Visualisation

Data & Cloud Platforms: Databricks, Snowflake, PostgreSQL, MongoDB, AWS

AI Tools: Claude Code, Cursor, Codex

PROJECTS

Hive Joy — **Australian Honey Marketplace** | *Next.js, Python, Supabase, Cloudinary, PostgreSQL, Stripe, Vercel*

- Analysed a 12-month Australian marketplace dataset using Python (Pandas, NumPy) to identify trends in sales, customer behaviour, and seller performance.
- Measured business KPIs including GMV, AOV, repeat purchase rate, customer lifetime value, and seller contribution, translating data into actionable business recommendations.
- Created visualisations using Matplotlib, Seaborn, and Plotly to communicate insights on revenue trends, geographic demand, customer behaviour, and product performance.
- Queried and analysed PostgreSQL datasets on Supabase to prepare structured data for business reporting and dashboard development.

Data Visualisation Project — **US Mass Shootings Dashboard** | *R Shiny*

- Collected and integrated public datasets from multiple sources, performing data cleaning, transformation, and validation to create a consistent dataset for analysis.
- Conducted exploratory data analysis (EDA) in R to identify trends in incident frequency, fatalities, geographic distribution, and temporal patterns.
- Performed data wrangling using dplyr, tidyr, and related R packages to handle missing values, standardise variables, and prepare data for analysis.
- Designed and developed an interactive R Shiny dashboard with dynamic filters, charts, and maps, enabling users to explore trends by year, state, incident characteristics, and victim statistics.
- Translated analytical findings into clear visualisations and data-driven insights, demonstrating the ability to communicate complex information to non-technical users.

Weather Watch — **Databricks Analytics Platform** | *Databricks, PySpark, SQL, Streamlit, Python*

- Architected a scalable cloud analytics pipeline on Databricks to process 1.1M+ weather records using PySpark and SQL, delivering anomaly detection models via interactive Streamlit apps.
- Conducted exploratory data analysis to identify weather trends, regional patterns, and anomalies across multiple cities.
- Applied K-Means clustering and anomaly detection techniques to discover climate patterns and unusual weather events.
- Built interactive dashboards to communicate KPIs, trends, geographical insights, and model outputs using Databricks and Streamlit.

Multi-Agent Research Pipeline — **AI Research Assistant** | *Python, FastAPI, LangGraph*

- Developed a multi-agent research pipeline to automate the collection, analysis, and synthesis of information from multiple web sources.
- Designed workflows to identify key themes, conflicting evidence, and trends, generating structured reports for easier decision-making.
- Built automated evaluation processes to assess report quality based on relevance, completeness, and clarity.
- Delivered the solution through a FastAPI application with an interactive interface, enabling users to generate and review research reports on demand.

EDUCATION

Master of Data Science Feb 2024 – Dec 2025

Monash University, Melbourne, Australia | Data Wrangling, Data Exploration & Visualisation, Big Data Processing

Master of Business Administration (Part-Time) Aug 2019 – Mar 2023

Pokhara University, Pokhara, Nepal | Accounting, Finance, Marketing

Bachelor of Electrical Engineering Oct 2013 – Dec 2017

Tribhuvan University, Kathmandu, Nepal | Power Systems, Engineering Management, Computer Programming, Control Systems

LANGUAGES

Nepali, English (88/90 in PTE)

VOLUNTEERING

- Served as President of the Electrical Club for 2 years, leading student initiatives, organising activities, and coordinating team events.
- Mentored junior students during final year of undergraduate studies, providing academic and technical guidance.
